PROJECTS

Zigu

Developed Zigu, a logistics platform designed to bridge the gap for smaller transporters. Enabled drivers to receive load notifications, manage trips, and upload images from various stops, while providing real-time tracking for shippers. Added an integrated tutorial throughout the app, ensuring users could easily navigate and understand all features. The app aims to inspire innovation, empower transporters, and enhance logistics operations.

GolfTraxx App

Developed a GPS-powered golf tracking app using Flutter, enhancing user experience with real-time distance calculations, scorekeeping, and course management. Implemented an intuitive UI, optimized performance, and integrated Google Maps API for precise golf course navigation.

Utrack App

Developed Utrack, a multi-device tracking application that allows users to monitor live locations, manage geofences, and receive real-time alerts. Implemented device management settings and integrated PayPal for subscription plans, enhancing user control and security in fleet tracking.

ProGps App

Developed ProGps, a vehicle tracking application similar to Utrack, allowing users to monitor live locations, set up geofences, and receive real-time alerts. Integrated device management settings and subscription plans, providing enhanced fleet management and security features for users.

Bridge Expedite App / taxi Dispatch App / Shipper Driver

Developed a driver-focused logistics platform enabling driver signups, vehicle and bank detail management, and an admin approval system. Implemented bid-counterbid functionality for load assignments, real-time trip management, and profile management. Enhanced user experience with notifications for approvals, load updates, and trip progress.

NowBy App

Developed NOWby, a social networking app with user authentication, post creation, and radius-based post visibility. Implemented comments, user tagging, and replies, along with contact invitations and real-time notifications when contacts join nearby, enhancing user engagement and interaction.

Food Devlivery App (Resturant, Driver, Cutomer)

A food delivery app designed for restaurants, drivers, and customers. It enables restaurants to manage orders, drivers to receive and deliver orders with real-time tracking, and customers to browse menus, place orders, and track deliveries. The app streamlines the entire food delivery process, offering seamless coordination between restaurants, drivers, and customers for a smooth and efficient experience.

Courier Broker App

Developed Courier Broker, a logistics platform where drivers can add vehicle and bank details and receive admin approval for load assignments. Implemented a feature to filter available loads and place bids. After bidding, drivers can chat with the shipper to discuss load details. The app also supports trip completion once the load is delivered, ensuring a smooth process from bid to delivery.
